

The FIM System[®]

FIM System[®] Advantage

How do you differentiate the level of care you provide?

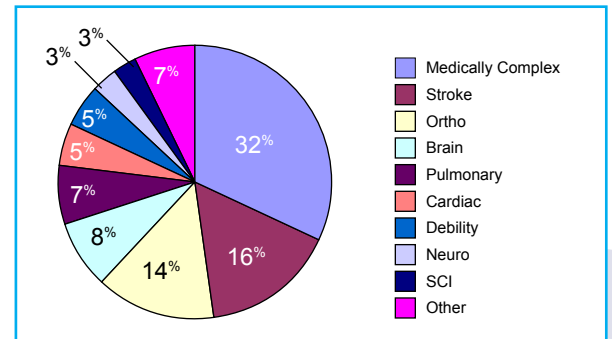

Do you have a valid and reliable way to measure patient function and gains over time?

Do you benchmark your program's performance against national outcomes?

Do you use your data to successfully communicate with various audiences?

Your subscription to The FIM System[®] outcomes measurement program will enable you to:

- Evaluate the efficiency and effectiveness of your program
- Become part of a national database, gaining access to national long-term care hospital benchmarks
- Use the FIM[™] instrument to determine the severity of patient disability and monitor patient functional gains
- Generate data that facilitates useful communication with referring acute care hospitals, physicians, families, and insurance and managed care companies
- Generate important data for the accreditation processes of the Joint Commission

FIMware[®] Software

Our powerful yet user-friendly FIMware[®] software allows you to:

- Create your own patient database
- Run meaningful reports from your desktop
- Capture follow-up assessments
- Export data for internal use
- Determine the FIM-FRG for each patient
- Generate FIM[™] profiles that graphically represent the functional status of each patient
- Produce patient listings based upon user-defined criteria

The Benefits

Outcomes Management for Long-Term Acute Care Hospitals

Clinical Benefits

- Determine the severity of patient disability upon admission
- Use the FIM™ Profile Report to characterize patient deficits, target intervention needs, monitor progress, and facilitate discussion in team conferences
- Set rehabilitation goals and monitor functional gains
- Predict outcomes such as discharge destination
- Evaluate the efficiency of interventions
- Improve communication with families, referring acute hospitals, insurance companies, and managed care organizations
- Track quality indicators (e.g., program interruptions, discharge to acute care and SNFs, number of cases with little or no functional gain)
- Generate important data for accreditation by The Joint Commission, CARF, and other regulatory agencies

Reports

Standard quarterly reports provide key performance data for each enrolled facility plus national comparative data. Additional reports are available, including:

- Corporate summary reports
- Internal program reports

Education, Training & Consultation

Training & Credentialing

UDSMR offers a variety of training programs and resources. We also conduct a two-phase credentialing process that ensures proper collection of data by each facility.

Consultation

Clinical expertise is available to assist subscribers with analyzing, interpreting, and applying data to help meet unique facility needs. On-site clinical consultative services are also available.

Program Benefits

- Detect trends in case load, patient severity, and length of stay
- Track discharge-to-community percentages
- Monitor goal attainment at the patient or impairment level
- Predict variances to budget resources
- Evaluate the efficiency of resource utilization
- Compare performance to external reference points that are unique for LTAC providers
- Document positive performance indicators for use in business development
- Obtain quantitative data for negotiations with payers in managed care organizations
- Provide critical performance feedback to referral sources
- Utilize and design management reports from desktop software
